

Velocity Scheduling System Coaching Program is a complete scheduling system with a simple, yet extremely effective framework:

The focus as we implement the framework is NOT on efficiency but on FLOW. This switch in thinking allows for extremely fast execution and results. And because this is a visual system it enrolls the entire shop in the process and works with any existing ERP. ([click here to view client results](#))

Participants are also taught how to direct Lean and Six Sigma efforts (if they have those programs) to get the best bang for their buck. This holistic approach allows clients to focus all their resources on the most important bottom-line activities and can result in a quick reduction in overtime and improvement in cash flow.

The key to the program's success is the coaching. Everyone has read *The Goal*, but no one knows specifically what THEY should go do for the unique situation in their shop. This program solves that.

Each shop is guided through the implementation under their unique conditions. Job shops are extremely complex and vary in that complexity, so this is NOT a training program but a "go and do" program focused on highly custom job shops. ([click here to see a list of the type of shops that have participated](#))

The program is on-line (using videos and live coaching sessions) allowing an extremely cost-effective situation. There are no consultants camped in the conference room and there are no travel expenses. The program is also backed with a 100% money back guarantee. If for some reason the program does not work for a particular shop, they can get a full refund (details at [Velocity Scheduling System Coaching Program](#)).

The best way to find out if YOUR shop is a good fit for this program is to watch the [How to Get More Jobs Done Faster Webinar](#) or if you're ready to get on with the results – sign up for a free strategy session to make sure YOUR shop is a good fit:
